

ORVYN'S EXOHAND

EMG-DRIVEN ROBOTIC HAND ASSIST SYSTEM

OUR MISSION

To empower people with reduced hand function by translating muscle signals into natural hand movements—restoring independence, dignity, and quality of life.

RESTORES ASSISTANCE

Amplifies limited user effort to support daily hand activities.

REAL TIME-RESPONSE

Processes signals instantly for smooth and reliable hand assistance.

INTENT-DRIVEN CONTROL

Uses user intent to deliver natural, intuitive and accurate movement.

Everyday Tasks

Supports activities like drinking, eating and holding objects with ease.

Stroke Rehabilitation

A valuable therapy tool to support recovery and improve hand function after stroke.

Improved Independence

Enhances confidence and self-reliance by enabling greater participation in daily life.

WHY IT MATTERS

Supports Rehabilitation

Assists stroke and neurological patients in regaining hand function.

Improves Independence

Helps patients perform daily tasks with greater ease and confidence.

Enhances Quality of Life

Promotes dignity, self-reliance, and overall well-being.

Supports Clinicians

Provides measurable progress and insights to guide therapy.

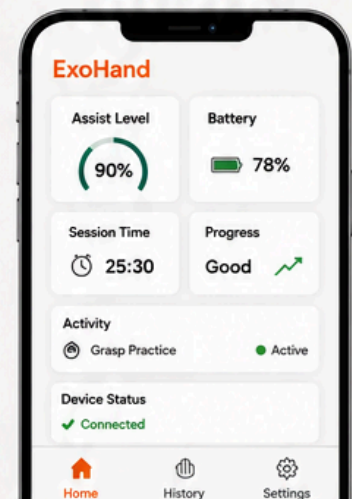

“

Technology that moves with you.

Recovery that stays with you.
